Subject:	Data IT: Decision letter for IDATA-39-02175B

Manuscript Number: IDATA-39-02175B
Manuscript Title: The Influence of Probabilistic Methodologies on Networking
Corresponding Author: Mr Skůpa

Dear Mr Skůpa,

Based on the recommendation of the handling Editorial Board member, we are delighted to accept your manuscript entitled "The Influence of Probabilistic Methodologies on Networking" for publication in IT Data. Thank you for choosing to publish your work with us.

As you will see below Reviewer #1 still felt that it would be valuable if you could provide some kind of visualization tool for these data. We do not want to delay publication because of this matter, but if you are able to create a visualization tool and host it on a laboratory or institutional website, you would be welcome to add a link to the tool during the proofing process.

Licence to Publish

• The corresponding author of an accepted manuscript is required to complete an Open Access Licence to Publish on behalf of all authors; a link to the online portal through which you can submit this licence agreement will be sent in a separate email.

Article-processing charge

• If applicable, you will also receive a link to our payment application where you can provide your billing information and pay your article-processing charge (APC) via credit card or by requesting an invoice.

Please note that your paper cannot be sent for typesetting to our production team until we have received the above information.

An in-house curator will now produce the machine accessible metadata record that will accompany your Data Descriptor upon publication. You may be contacted and asked to provide additional information or files, as needed. Please be sure to respond to the curator promptly. The metadata record must be completed before proofs can be generated and your submission published online.

You will receive proofs for checking shortly after the aforementioned metadata has been completed and your manuscript sent for typesetting. Please check the author list and affiliations to ensure that they are correct. For the main text, only errors that have been introduced during the production process or those that directly compromise the scientific integrity of the paper may be corrected at this stage. Please ensure that only one author communicates with us and that only one set of corrections is returned. The corresponding (or nominated) author is responsible on behalf of all co-authors for the accuracy of all content, including spelling of names and current affiliations.

We would welcome the submission of a 'cover image' to highlight your Data Descriptor on the IT Data homepage. Images should relate to the content of your Data Descriptor, but need not be contained within the paper. Images should be at least 1400px x 400px in size and of as high resolution as possible (ideally 300dpi), with the focus of the image (if applicable) to the right of centre. Unfortunately, we cannot promise that your suggestion will be used.
